

Organza 15-5-10 +TE

High nitrogen complete fertilizer containing organic acids and amino acids

Formulation: Gravel

Saturation level: 350 grams per liter

HANNANN NAHADE ASIA

SOIL REGENERATION ,
SUSTAINABLE CULTIVATION

Introduction

NPK 15 – 5 – 10 + TE of HANNANN Company contains high amounts of macro elements (high consumption) nitrogen, phosphorus and potassium and organic compounds such as amino acid humic acid and fulvic acid. Also, this fertilizer is rich in micronutrient elements, which increases the absorption and then improves the quantitative and qualitative performance of the products. The formulation of this fertilizer is in the form of granules and it is produced through special mechanisms in such a way that it is completely soluble in water. Also, with high amounts of nitrogen and potassium, this fertilizer plays an effective role in increasing vegetative growth and improving the quality and performance of agricultural and garden crops.

Benefits and Particulars

- Extremely fast solubility in water
- Can be used as foliar spraying, topical positioning and with irrigation water
- Increasing absorption of nutrients
- Helping to improve soil health by reducing the use of chemical fertilizers
- Increasing the activity of soil microorganisms
- Increasing plant resistance against environmental stresses and pathogens
- Increasing the quantitative and qualitative performance of products
- Eco-friendly
- Contains a high Percentage Of Nitrogen to increase the vegetative growth of the planet
- Contains a high Percentage Of Potassium to ripen the fruit and increase the quality of the Product

Element	Percent	Element	Percent
Total Nitrogen	15	Free Amino Acid	2
Consumable Phosphor	5	Humic Acid	3
Potassium soluble in water	10	Fulvic Acid	5
Soluble Magnesium	1	Organic materials	12

Product	Method of Use	Amount of Use
Garden	Topical Positioning	0.3-0.5 Kg for every tree(50 gr Per Year Of Tree Age)
	Irrigation water	15-20 Kg in hectare (2 times)
	Spraying	2-3 Kg in each 1000 Liter of water
Agricultural	Under cultivation	50-100 Kg in hectare
	Irrigation water	10-15 Kg in hectare
	Spraying	1-2 Kg in each 1000 Liter of water

Notes:

- Avoid mixing with very acidic and alkaline compounds.
- Spraying should be done early in the morning or at sunset.
- In case of mixing with other compounds and poisons, it should be tested first in a small amount and at a limited level.
